

Thermax Ne0 Sets the Benchmark with India's First PSA Bio-CNG Plant

Industries

Biogas/Bio CNG/Renewable Natural Gas (RNG)

Challenge

To implement India's first large-scale PSA-based Bio-CNG plant while ensuring:

- 96% methane purity
- Near-zero methane loss
- Reliable 10 TPD continuous operations
- Integration with CGD infrastructure

Solution

Deployment of a PSA-based biogas upgrading system with:

Caustic Scrubber → Static Media Tower → Moisture Removal → Compression → PSA

Company Profile

India's leading clean energy and city gas distribution joint venture driving large-scale adoption of sustainable fuels across India.

Key Achievements

High Methane Purity

96% methane purity, compliant with Bio-CNG standards

Exceptional Recovery

99% methane recovery, minimizing product loss and maximizing plant economics

Product Gas Applications

The upgraded biomethane is compressed and supplied to CNG stations for use as automotive fuel.

The integrated system delivers high-purity, pipeline-grade Bio-CNG suitable for commercial distribution. Thermax Ne0 successfully established PSA as a scalable, high-recovery technology for large Bio-CNG plants in India, setting a benchmark for future commercial projects.
